

Dubai Racing Club

Customer since:	1999
Industry:	Horse Racing
Employees:	550
Headquartered:	Dubai, UAE

Company Overview:

Dubai Racing Club is an internationally recognized governing body for horse racing in the United Arab Emirates (UAE). It administers all aspects of the sport, including the implementation of the UAE Rules of Racing, the registration of horses for racing and the licensing of all trainers, jockeys, officials and stable personnel. It handles all entries and declarations for all race meetings in the UAE.

Business Challenge:

As a governing body for horse racing in the UAE and their growing business, DRC expanded rapidly which forced them to reevaluate their existing finance, procurement and HR processes from the ground up. DRC required an integrated, reliable solution that could be highly flexible and parameterized to meet their exact needs. The company considered upgrading its existing system which was unreliable, lacked future support and required additional custom applications. Despite the ability to produce automated cheques and statements, a lack of understanding of the existing system caused inefficient procedures to be developed. The production of a cheque required manual creation with the risk of human error rather than using system generated data. DRC needed a dependable, consolidated ERP system.

- ❖ Disintegrated system.
- ❖ Time intensive Human resource & payroll process.
- ❖ Manual data entry, time delays in getting transactions in and out of the existing accounting solution.

The Solution:

After an extensive evaluation of the DRC business requirements to establish the scope of the project, Cosmic EMS was deployed in just ten weeks, easily making the deadline set to be ready for the start of the racing season. This new system not only accomplished the DRC's primary goals , to move off the legacy system and gain ownership of their data – but it also provided a wealth of additional features and functionality, including ease of use and automation of processes. With General Ledger, Payables, Receivables, Inventory & HR modules, Cosmic EMS gave DRC all the consolidated information required by them. With a reliable ERP solution and a powerful & scalable Oracle database engine, employees have quick access to the information they need, helping to increase their productivity.

Benefits:

Improved Access, Ease of Use and Accountability:

The Cosmic EMS application was designed and implemented to provide an easy-to-use interface, resulting in reduced training costs and rapid user adoption.

Scalability:

One of the key requirements of the system was that it should provide a technological foundation for DRC to scale their infrastructure. The Cosmic EMS system, based on Oracle, has been designed to accommodate growth over time.

Seamless Integration:

By implementing Cosmic EMS solution the purchase, sales , inventory and HR processes were updated easily and instantly to the financial module without manual or duplicate key entry of information.

Ease and accuracy of reporting:

Report information has more integrity than previous. Reports are generated automatically from the fully integrated Cosmic EMS application. Through the full integration of the system, many manual procedures have been eliminated which has reduced previous keying & manual entry errors.
